Re: Jan. 12, 1995 Meeting At N. Mecklenburg Landfill

Present at Meeting:

For DEHNR: Mr. Bobby Lutfy, Mr. Jim Bateson, Raleigh Office. Ms. Jan McHargue, Western Area Office all with Solid Waste Section, Div. Of Solid Waste Management.  
ESI: Mr. Paul Banks, Porject Gelogist  
N. MECKLENBURG LANDFILL: Mr. Larry Griffin, President  
FBHA: Frank B. Hicks, Jr.

Meeting was to discuss concern in Mr. Lutfy's Letter of Jan 11, 1995 to Mr. Banks  
ESI. Project Geologist

Regarding the vertical seperation concerns that at least four feet exist between bottom of solid waste and high water table and/or bedrock it was decided to dig test pits at two locations to verify that material that had stopped the drill was not really bedrock. Both pits were dug to 20 feet depths and did not encounter "bedrock" but did advance readily with a backhoe and encountered anticipated soil similar to the local "Concord Pea Gravel". We understand that this provided the "DEHNR" group a sufficient comfort level to proceed with the current grading plan.

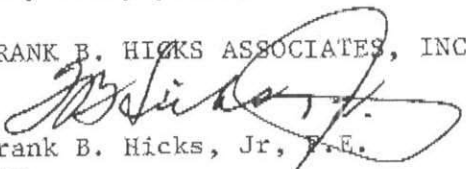

For responses to various ground water monitoring concerns, see attached letter to Mr. Lutfy from Mr. Paul Banks, ESI Project Geologist.

We understand data on the additional monitoring wells will be submitted when completed. We will assembly the 5 sets of data in binders and call Ms. McHargue before shipping.

If you have any additional question, please call us.

Very truly yours,

FRANK B. HICKS ASSOCIATES, INC.
